Canadians have the highest level of confidence in responding to public health threats like a pandemic; importance of protecting our environment and improving quality of life for First Nations on reserves has increased

Nanos Policy Map Summary

October, 2020
(Submission 2020-1737A)

NANOS

Summary

The tracking of several social issues shows an increase in confidence in the nation's ability to keeping our healthcare system strong and to preserve social programs, with the highest confidence in the new measure of responding to public health threats like a pandemic. With regards to the importance of these issues, protecting the environment has received a higher importance score since 2019, as has improving the quality of life for First Nations living on reserves.

- **Canadians have the highest level of confidence in responding to public health threats like a pandemic** – In the midst of the coronavirus pandemic, Canadians have the highest confidence level in the government's ability to find solutions to responding to public health threats like a pandemic, with 23 per cent confident and 50 per cent somewhat confident, which is 10 percentage points higher than preserving social programs, the measure with the second highest intensity of confidence (13% confident; 50% somewhat confident).
- **Confidence in keeping our healthcare system strong and preserving social programs has increased since 2019** – Six in ten Canadians are either confident (15%) or somewhat confident (45%) in the federal government's ability to find solutions to keep our healthcare system, which is an increase from 2019 (11% confident; 41% somewhat confident). Confidence in preserving social programs has also seen a marginal increase, with 13 per cent who are confident and 50 per cent somewhat confident in 2020, compared to 10 per cent confident and 49 per cent somewhat confident in 2019.
- **Canadians give a higher importance score to keeping our healthcare system strong, investing in education and responding to public health threats** – When scoring the importance of various social issues using a ten point scale, keeping our healthcare system strong was scored higher (mean score of 9.3) in terms of importance than other social issues, followed by investing in our education system (mean score of 8.9; 8.7 in 2019), responding to public health threats like a pandemic (mean score of 8.9), managing the pressures of an aging population (mean score of 8.4; 8.6 in 2019), further protecting our environment (mean score of 8.5; 8.1 in 2019), preserving social programs (mean score of 8.1), ensuring Canadians have a high standard of living (mean score of 8.1), improving the quality of life for First Nations living on reserves (mean score of 7.7), and encouraging Canadian culture (mean score of 7.3; 7.0 in 2015).
- **Since 2019, Canadians give a marginally higher importance score to protecting the environment and improving the quality of life for First Nations living on reserves** – In general, the importance scores for social issues have remained relatively steady since 2019, except for further protecting the environment, which has seen an increase of +0.4 since 2019, and improving the quality of life for First Nations living on reserves, which has seen an increase of +0.3 from 2019 to 2020.

These observations are based on a hybrid telephone and online random survey of 1,003 Canadians between September 30th and October 4th, 2020 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The margin of error for a random survey of 1,003 Canadians is ±3.1 percentage points, 19 times out of 20.
This research was sponsored by Nanos Research.

Methodology

Methodology

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,003 Canadians between September 30th and October 4th, 2020 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals randomly called using random digit dialling with a maximum of five call backs.

The margin of error for a random survey of 1,003 Canadians is ±3.1 percentage points, 19 times out of 20.

This research was sponsored by Nanos Research.

Methodology

Previous waves

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians between February 2nd and 5th, 2019, as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada. The margin of error for a random survey of 1,000 Canadians is ±3.1 percentage points, 19 times out of 20.

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians between July 23rd to 26th, 2017, as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada. The margin of error for a random survey of 1,000 Canadians is ±3.1 percentage points, 19 times out of 20.

A representative online random survey of 1,000 Canadians, conducted from July 5th to 9th, 2012, accurate 3.1 percentage points plus or minus, 19 times out of 20;

A national RDD dual frame (land- and cell- lines) random telephone survey of 1,013 Canadians conducted between April 6th and 9th, 2013 as part of an omnibus survey. The margin of error for a survey of 1,013 Canadians is ±3.1 percentage points, 19 times out of 20; and,

A national RDD dual frame (land- and cell-lines) random telephone survey of 1,000 Canadians conducted between May 24th and May 28th, 2015 as part of an omnibus survey. The margin of error for a survey of 1,000 Canadians is ±3.1 percentage points, 19 times out of 20.

A national RDD dual frame (land- and cell-lines) random telephone survey of 1,000 Canadians conducted between July 28th and August 1st, 2016, as part of an omnibus survey. The margin of error for a survey of 1,000 Canadians is ±3.1 percentage points, 19 times out of 20.

About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.

Technical Note

Element	Description
Organization who commissioned the research	Nanos Research.
Final Sample Size	1003 Randomly selected individuals.
Margin of Error	±3.1 percentage points, 19 times out of 20.
Mode of Survey	RDD dual frame (land- and cell-lines) hybrid random telephone and online omnibus survey
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Fieldwork/Validation	Live interviews with live supervision to validate work
Number of Calls	Maximum of five call backs.
Time of Calls	Individuals were called between 12-5:30 pm and 6:30-9:30pm local time for the respondent.
Field Dates	September 30th to October 4th, 2020.
Language of Survey	The survey was conducted in both English and French.

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2016) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines could not participate.
Stratification	By age and gender using the latest Census information (2016) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	10 per cent, consistent with industry norms.
Question Order	Question order in the preceding report reflects the order in which they appeared in the original questionnaire.
Question Content	Topics on the omnibus ahead of the survey content included: views on political issues, views on economic issues, views on federal policies, separatism, self-isolation, future standard of living, government spending and conservation.
Question Wording	The questions in the preceding report are written exactly as they were asked to individuals.
Survey Company	Nanos Research
Contact	Contact Nanos Research for more information or with any concerns or questions. http://www.nanos.co Telephone:(613) 234-4666 ext. 237 Email: info@nanosresearch.com.
